Angola, Luanda, Cazenga

## PROFILE

Font-end Developer, Game Developer and Graphic Designer with self-knowledge in Html,CSS, Bootstrap with more than 7 years of experience working as Web Designer and 3 years working as Front-End using React and Sass.

I've been developing digital games using Unity Engine and C# programming language for 4 years, and I have a Youtube channel "Daniel" where I present my progress and talk about the games I've developed.

As a Front-end I like a good Design and UX, and to improve the user experience, because the interface has to talk and interact with the end user. As a Game Developer, which I am passionate about, I love the idea of creating a world where people can live a story and have fun in another world.
